EDUCATION

Stanford University

B.S. in Computer Science, GPA: 3.96

Stanford, CA

Sep. 2023 – June 2027

EXPERIENCE

Citadel

Software Engineer Intern

June 2026 – Aug. 2026

New York, NY

- Incoming Summer 2026 in the Equity Quantitative Research (EQR) team

Amazon

Software Engineer Intern

June 2025 – Sep. 2025

Dallas, TX

- Built a scalable, full-stack AI agent service with Python, AWS, and React.js to analyze HR case workflows and pinpoint relevant logs among millions generated per hour across CloudWatch accounts; available to internal teams
- Improved agent response time by 400% by migrating packaging from Docker to Amazon Peru, optimizing build size (1 GB → 200 MB), eliminating bottlenecks via CloudWatch log debugging, and fine-tuning the agent knowledge
- Designed and implemented security/access features - including cross-account CloudWatch log access and team-specific account and knowledge base access - using AWS CDK, IAM roles, and Harmony internal front-end
- Collaborated with team members, conducted extensive research on proprietary Amazon technologies, and iteratively refined agent design based on feedback and team-specific workflows

Stanford Cybersecurity and AI Lab

Researcher

Dec. 2024 – June 2025

Stanford, CA

- Enhanced Cybench and Bountybench's functionality—cybersecurity benchmarking tools for LLM models—by developing and integrating high-quality CTF challenge and bug bounty tasks into the CI using Python and Docker
- Interacted with server-side software through the configuration and testing of API requests and endpoints
- Improved user productivity by 300% by adding features on front-end and agent workflow on the back-end
- Safely implemented changes by developing unit tests and collaborating with reviewers to ensure code integrity

PROJECTS

Poke Pocket Market | Javascript/Typescript, React.js, Next.js, Firebase, Digital Ocean

- Built and deployed a trading platform for 100+ active users who play Pokemon TCG Pocket
- Designed Firestore database and algorithms that improve operation efficiency by 500% on user and card records
- Delivered a modern user interface and user experience with Tailwind CSS and ShadCN components
- Auto-update cards by data scraping 1000 cards/second with Python and storing data in Firebase Cloud Storage
- Allowed HTTPS connection using Nginx reverse proxy to redirect traffic within Digital Ocean server

Aspen | Discord.py, OpenAI API, LangGraph, Exa API, Python

- Built an AI-powered therapist that monitors Discord channels and reaches out to individuals in distress
- Directed the flow of conversation phases with LangGraph and OpenAI prompting
- Implemented web searching/crawling with Exa API to use intake information and design a therapy plan

Project Launchpad | Unity, C#, FL Studio, Audacity

- Created and released a Guitar Hero/Osu-inspired rhythm game utilizing all letter keys for note interactions
- Synchronized visual cues with note interactions using Unity's particle system for enhanced gameplay
- Streamlined creating and importing levels stored in JSON files through Unity's Data Persistent Path

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C, C++, Java, C#, HTML, CSS

Frameworks/Libraries: React.js, Next.js, Unity, Docker, Strands Agents

Services/Tools: AWS, Firebase, Git/GitHub, Linux, Nginx, CloudWatch, Lambda

Concepts: Full-Stack Development, GenAI Integration, Cloud Infrastructure, Data Structures & Algorithms
